Aluminium

A really popular material and one that we love manufacturing is Aluminium metal roofing. We can custom make basically anything you need for your metal roof. Below are some advantages of this wonder material;

It has great longevity, well over 50 years with optimum maintenance. There are an array of styles / colours to chose from to match different architectural styles i.e. prefa aluminium is becoming quite popular with modern builds lately.

It’s better wind resistant than non-metallic roofing options. It’s resistant to fire and has great energy efficiency to keep the home cool in warm temperatures. This is due to it’s ability to reflect light and emit heat.

Most aluminium and steel roofing materials come are available with cool roof coatings that meet LEED and energy star compliancy. An excellent choice if you live in a coastal area.
